

OZONE LAUNCHES SLIMMEST AUTOMATIC SLIDING DOOR SYSTEM 'AIRDRIVE'

A sliding door fitted with Airdrive door system

Ozone, a provider of architectural hardware solutions, has announced the launch of its slimmest automatic sliding door system 'Airdrive'. It is designed with a tiniest yet powerful operator of only 68mm height and 135mm depth enabling it to be the slimmest in size, which is the USP of the Airdrive door system. It delivers consistent performance without any halt as it is engineered in compliant with best prevailing standards such as EU standard EN 16005, EN60335, EN 150 13849 1: 2008, German standards DIN 18650S, CE Conformity and EU low voltage directives with max power consumption of 250W. It is manufactured following ISO 9001: 2000 standards which ensures the stringent quality check at every stage as a result a best quality final product delivered.

With Ozone's Airdrive automatic door system, you can achieve max door opening of 2m and 3m in case of single sliding and bi-parting sliding double panels respectively. It is suitable for door panel weighing 150 kgs for single sliding and 120 kgs of each door panel in bi-parting. It can be integrated with all access control devices, such as microwave sensor, push button, remote control, etc. and can integrate safety beam barriers for safe movement of people. It is the best choice for professionals looking for 'not so much visible' automatic door system.

Airdrive automatic door system is introduced from S Series which comprises premium architectural hardware fittings and solutions for high budget luxurious projects. S Series products are

crafted with high quality, superior finish and engineered as per latest international quality and safety norms so that the final product delivers smooth and silent performance. Ozone offers large range of automatic doors, hotel guest room locks and intelligent locks equipped with latest technology.
